3. 3M™ ESPE™ Lava™ Plus restoration height extended to 19.6 mm ................. 2
1. **Straumann® n!ce™ milled restorations (for Europe only)**

For over 60 years we have successfully delivered tooth replacement solutions that have set industry standards and improved lives – especially in the field of implantology. We have used our experience to develop a new glass-ceramic material - n!ce™.

n!ce™ restorations are Fully Crystallized (FCr) restorations available in two levels of translucency: HT (High Translucency) and LT (Low Translucency). Both translucencies are available in shades A1, A2, A3, B2, B4 and C2. The indications of n!ce™ restorations are inlays, onlays, veneers, partial crowns and crowns.

n!ce™ milled restorations can simply be polished or alternatively stain and glazed. Please contact your local Straumann sales representative for more information about n!ce™.

2. **Upgrade of ticon® to Titanium Grade 4**

Our ticon® Titanium was upgraded to Titanium Grade 4, its processing remains similar.

3. **3M™ ESPE™ Lava™ Plus restoration height extended to 19.6 mm**

The 3M™ ESPE™ Lava™ Plus zirconia restorations can now be ordered with heights up to 19.6mm to allow more design freedom and larger bridge constructions.
